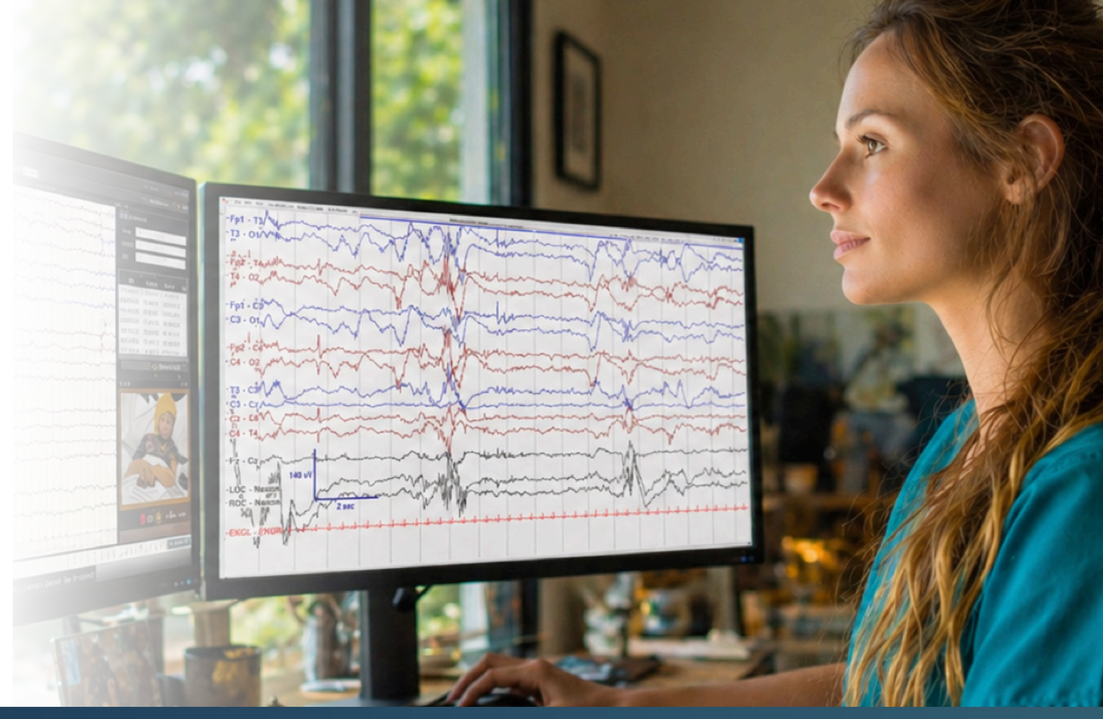
CortiCare®

Ambulatory Video EEG
With Intermittent Monitoring



"CortiCare's in-home EEG services are outstanding. The studies are of excellent quality, and the technologist impressions are well-written and efficient. CortiCare's commitment to excellence in patient care is second to none."

Neurologist, Major Northeast Neurology Practice

300+
Registered EEG techs

48 Hrs
Report turnaround time

12+
Years supporting EEG programs at scale

Grow Your EEG Program Without Expanding Your Staff

You Retain Clinical Control. CortiCare Manages the Execution.

HOW IT WORKS

01 Neurologist determines the need for long-term ambulatory EEG

02 You order & set up in-office using existing clinical staff & our Duo HD Conversion Kit for your Natus Trex System

03 Patient goes home with locked, tamper-proof equipment

04 Registered EEG technologists monitor the study remotely

05 Patient returns to your office for equipment removal

06 CortiCare analyzes the study & sends report within 48hrs

07 You retain clinical control, review the results, & bill directly

WHAT MAKES IT RELIABLE

- EMU-quality studies, built on consistent protocols aligned to ACNS guidelines
- Full-montage recording, reviewed by registered EEG technologists
- Structured escalation protocols and 24/7 patient support
- Secure remote EEG data server access and storage

WHAT NEURO PRACTICES TELL US

"We don't have the staff or workflow to add EEG in-house" → In-office setup using existing clinical staff. EEG training available

"We're not sure EEG pays for itself as a service line" → New reimbursement opportunity with minimal added overhead

"We're not confident in remote monitoring quality" → Registered technologists, ACNS-aligned protocols, you retain full interpretation control

WITH CORTICARE

Grow your EEG program without growing your headcount
